

For Immediate Release

Kwalu Launches Healthcare CET Extension

Atlanta — August 17, 2026 — Kwalu has launched a new CET extension for its healthcare product line, giving designers a faster way to configure products and develop layouts within their digital planning workflow.

The extension allows design teams to configure products, place them within layouts, and generate project documentation directly within CET.

"CET helps design teams move quickly from planning to specification," said Jennifer Adams, Senior Vice President of Sales at Kwalu. "Making Kwalu products available within that workflow makes it easier to work with us throughout the project."

The initial release focuses on Kwalu's healthcare offering, with additional products and configurations expected to be added over time.

The Kwalu CET extension is available now through the CET Designer Marketplace.
